SUMMARY

Pre-final year Computer Engineering student seeking a Cloud / DevOps Engineer internship. Hands-on with AWS, Docker, Kubernetes, Jenkins, and Terraform through 3 projects covering CI/CD pipelines, Amazon EKS deployment, infrastructure as code, and Kubernetes monitoring with Prometheus and Grafana.

EDUCATION

B.Tech in Computer Engineering, AISSMS Institute of Information Technology, Pune **2024 – 2028**

- **CGPA:** 8.00 / 10
- **Coursework:** Operating Systems, Computer Networks, Database Management Systems
- **Activities:** AWS Student Builder Group Co-Lead; participant in 10+ hackathons

Higher Secondary Certificate (HSC), Vivekanand Pratishthan's Junior College, Jalgaon **2024 | 85%**

Secondary School Certificate (SSC), Vivekanand Pratishthan English Medium School, Jalgaon **2022 | 86%**

TECHNICAL SKILLS

Cloud: AWS (EC2, S3, VPC, IAM, EBS, EKS, ECR, Application Load Balancer)
Containers & Orchestration: Docker, Kubernetes, Helm, Kind, Kubernetes Ingress
CI/CD & Automation: Jenkins, GitHub Actions, GitHub Webhooks, Docker Hub
Infrastructure as Code: Terraform (modules, variables, outputs, state), multi-environment setups
Monitoring: Prometheus, Grafana
Programming & Scripting: Python, Bash / Shell Scripting, JavaScript
OS & Version Control: Linux Administration, Git, GitHub
Databases & Networking: MySQL, MongoDB, Networking Fundamentals

PROJECTS

End-to-End CI/CD Pipeline with Kubernetes Monitoring GitHub Repository
Tools: *Jenkins, Docker, Kubernetes, Helm, Prometheus, Grafana*

- Built a 5-stage Jenkins CI/CD pipeline (Git push, Docker build, Docker Hub push, Kubernetes deploy, rollout check) triggered by GitHub webhooks on every push.
- Configured Jenkins on a dedicated agent with SSH key authentication and deployed a Flask and MySQL application to a Kind cluster.
- Installed Prometheus and Grafana via Helm in a dedicated monitoring namespace to build cluster-health dashboards.
- Secured settings with Jenkins Credentials and Kubernetes Secrets; attached a PVC for persistent MySQL storage.

Three-Tier Application Deployment on AWS EKS GitHub Repository
Tools: *AWS EKS, ECR, ALB, Helm, Docker, Kubernetes*

- Deployed a 3-tier React.js, Node.js, and MongoDB application on Amazon EKS using t3.small worker nodes.
- Containerized all 3 tiers with Docker, pushed images to Amazon ECR, and defined Deployments, Services, Secrets, PV, and PVC.
- Installed the AWS Load Balancer Controller with Helm and IRSA to enforce least-privilege AWS access.
- Exposed the application publicly through Kubernetes Ingress backed by an AWS Application Load Balancer.

Multi-Environment AWS Infrastructure using Terraform GitHub Repository
Tools: *Terraform, AWS EC2, AWS S3*

- Provisioned 3 isolated AWS environments (Dev, Staging, Prod) from reusable Terraform code.
- Created 2 reusable modules (EC2 and S3) with per-environment variables and outputs for repeatable setups.
- Ran the full Terraform lifecycle (init, plan, apply, destroy), pinned provider versions, and kept state and SSH keys out of Git.

LEADERSHIP EXPERIENCE

Co-Lead, AWS Student Builder Group, AISSMS IOIT, Pune **July 2026 – Present**

- Lead a student AWS and cloud community of 30+ members, driving peer learning through hands-on cloud sessions.
- Organize 5+ technical events end to end: topic selection, speaker coordination, scheduling, promotion, and on-the-day operations.

CERTIFICATIONS & TRAINING

- AWS Cloud Quest: Cloud Practitioner (learning path), AWS Training
- Google Generative AI (GenAI), APAC Edition
